

I have more than 10 years experience in the web field in many aspects of web development including: general project management, hand coding, rapid prototyping, and full lifecycle development. I have extensive experience developing database driven applications in both Perl and PHP on open source platforms. I have worked both independently and with a team and I have clearly demonstrated my ability to make substantive contributions in both environments. I am seeking a permanent position in a small to midsize company or group where I can contribute to the growth of the company while maintaining and augmenting my expertise.

EXPERIENCE

TECHNOLOGIES
